

Standard Palm OS® Fonts

These fonts are the standard sets included with Palm OS® 3.x through 5.x (Garnet). Palm OS® Cobalt has scalable fonts but presumably will still support the same characters. Double-Density fonts (OS 5.x/Garnet) are the same with smoothed pixels.

All numeric values are in hexadecimal. To convert to decimal values, use the following table to convert the vertical hex values, and add in the horizontal column value (A=10):

hex	dec		hex	dec
00	0		80	128
10	16		90	144
20	32		A0	160
30	48		B0	176
40	64		C0	192
50	80		D0	208
60	96		E0	224
70	112		F0	240

Example: “A” is hex 40 and 1 which is $(64+1) = 65$ decimal.

These screens were captured from Metrowerk’s Constructor resource editor. All images are 130% of normal size.
